Consulting

According to a global study, digital transformation is in the top five IT technology initiatives among many international brands and companies. The rapid evolution of technology opens up new opportunities but can also expose risks. Dealing with these changes can be very time-consuming and potentially costly.

We at Fogbyte can help you with our consulting services to develop the right path for your digital transformation in an efficient and scalable way. We will analyze your needs, expose potential risks, streamline your processes, and propose the right strategy for upcoming projects all catered to your needs.

Our core competencies are:

- > **Adaption to evolving technologies**
- > **Cloud-focus approach**
- > **Project management**
- > **Training and documentation**
- > **Design and implementation**
- > **Optimization**

Architecture

Information technology has a significant impact on our everyday lives and businesses. Decision makers in IT are not always aware of the physical rules of the IT architecture. This leads to poorly coordinated projects, significant rework and less awareness among decision makers.

To overcome these challenges, the use of an IT architecture can produce several benefits to help an organization to analyze its current IT and to identify areas where changes could lead to cost savings or issues which could impact production or sales.

Our IT-architects at Fogbyte are specialized in areas such as native cloud architectures, cloud migration, DevOps, digital workplace and on-premise infrastructure. Our mission is to help our customers to design and build a stable, secure and tailored IT environment to meet future opportunities and requirements. With our expert knowledge and partnership with leading vendors & platforms, we support our customers through solution and architectural design all the way to the actual implementation and realization.

To guarantee continuous operation, we offer various managed service packages including support, maintenance & monitoring.

Strategy

Information technology today is becoming more and more a critical asset in the enterprise. Even enterprises not considering themselves as "hightech" are leveraging IT as a core element of their business models. IT systems, organization and processes may be designed well from a technical point of view, but are often poorly or not aligned at all with the business perspective. With expertise in both business and technology, our consultants develop an integrated IT strategy for the organization. Our IT strategy approach includes following activities:

Business and IT Alignment

- > Strategy from a Business Point of view
- > Strategy from a IT Point of view

Current IT state analysis

- > Baseline assessment
- > Application survey
- > Costs and staff
- > Best practice analysis
- > Ongoing projects
- > External supplier relationship

Future IT state analysis

- > Vision
- > Gap analysis

IT strategy roadmap

- > Define goals and scope
- > Roadmap with a timeline
- > Work packages with defined tasks
